PATCH DETAILS

Patch Name : **AdeptiaSuite_6_2_01_22Aug_2014.zip**

Build Tag : **Release_6_2_01_22Aug2014**

APPLIES TO

This patch can be applied on Adeptia Suite Version 6.2 GA Release.

RELEASE_6_2_01_22AUG14

What's new in this update?

1. Support for new applications in Data Interface.

In Data Interface support is added to transfer data from following application:

- RSS Feed
- Microsoft Dynamics GP
- Amazon Dynamo DB

For detailed description refer the *Using Data Interface Section* of Adeptia Suite Developer Guide.

2. Support to create IDOC schema by accessing SAP Server

Support is added to create IDOC schema, by directly accessing the SAP server. In the previous version you need to use the definition file to create IDOC schema.

3. Support is added to override FTP Server credentials from FTP Event to FTP Source.

Support is added to override FTP Server credential from FTP Event to FTP Source. In previous version you can only override File Path and File name ([Ticket #4726](#)).

4. Improved Rich Form

Rich Form version has been upgraded to improve rich form designing.

5. Support to create wizard using Rich Form.

In Web Form, support is added to create wizard using Rich Form.

6. Support for Trigger Now and Activate in Data Interface.

In Data Interface now support is added to Trigger Now and Activate. In previous version, to activate or trigger the Data Interface activity, you need to do it through the Event, which is attached with Data Interface activity.

Bug Fixes

1. When you move a project from one group to another, then it gives error that no user exists within destination group. ([Ticket #4643](#))
2. When LDAP is enabled and you try to login as Admin user with wrong password then blank screen opens. ([Ticket #4737](#))
3. When you run large number of process flow concurrently, then some process flows fails with "UndeclaredThrowableException" error ([Ticket #4557](#), [Ticket #3897](#)).
4. When we search the NonEDI logs with View Archived option then ErrorLog link does not display the error xml file.
5. In Data Mapper, if multiple target schemas are mapped and one schema is removed, then the other schema loses its mapping rules. This only occurs if the schemas are collapsed ([Ticket #4668](#)).
6. When you use DBquery function and the table has large number of records, then at the time of execution, it gives error "ORA-01000: maximum open cursors exceeded" ([Ticket #4723](#)).
7. When we perform offline migration and source environment contain process flows, which are in queued state, then objects does not get deployed to target environment and an error message "Timestamp format must be yyyy-mm-dd hh:mm:ss[.fffffffff]" is displayed.
8. When you use backend database, which is case sensitive, then it gives error while exporting or deploying the objects using Migration Utility.
9. While migrating the objects, if you retain EDI Schema, then at the time deployment, the migration utility gives error: "The system cannot find the file specified." ([Ticket #4384](#)).
10. When a context source activity is mapped to a data mapper with multiple stream input, adding an additional consumer to the context source, output stream will change the order of the streams entering the data mapper ([Ticket #4391](#)).
11. In System Dashboard, the time, which displays the Server up time, is not calculated properly ([Ticket #4540](#)).
12. Process flow dashboard is not calculating execution time duration in some cases. It happened only when process flow in completing less than 500 ms or 1 second ([Ticket #4654](#)).
13. When any formula is defined in any cell of the excel file, then at time of parsing it, incorrect value is parsed ([Ticket #4527](#)).
14. When an incoming mail is Base64 encoded, then Mail Source activity fails with error: BASE64DecoderStream cannot be cast to java.lang.String ([Ticket #4666](#)).

15. When file name contains colon, then FTP event fails with error: Invalid descendent file name ([Ticket #4405](#)).
16. On some of the Linux operating system, if you version control the objects then it fails.
17. Support is added to show Web Service Type ID in Process flow context.
18. When Web Service Consumer fails due to any reason, for example "Out of memory error" then the status of the Web Service Consumer is marked as Executed ([Ticket #4535](#)).
19. If you edit a WS Provider activity, which is created using a referential WSDL containing absolute path, and reload the WSDL with the file reference activity, then new path is not reflected in WSDL file stored in the WSDL folder ([Ticket #4522](#)).
